ANDON

Japanese QC visual control on official Pack C warehouse video

正常

CLEAR / run

呼び出し

HOLD / call

停止

ALERT / stop

person close to a moving vehicle

sdg_warehouse_cam-2 · warehouse3 · jidoka / poka-yoke / mieruka

VAST · NVIDIA Cosmos · CoreWeave / W&B · Cursor

A near-miss is still a human scrubbing cameras

The Architecture Reference payoff is already indexed. The product is stopping the line.

The brief's commodity example is PPE / hard-hat.

We do not build that. Judges have seen it.

Pack C is already segmented and searchable.

Re-ingest. Do not re-upload. Do not film LEGO for the judged demo.

VSS Explore is the platform UI.

Reskinning search is not a product. Andon + jidoka is.

A person close to a moving vehicle is the official query.

The gate must fail closed. False CLEAR is 重大不良.

安灯 on the Pack C clip — the clip is 現場

Green means the aisle is clear. Yellow calls a human. Red is a near-miss. The line does not run until someone looks.

緑 正常

AUTO_CLEAR

Path looks clear. HIGH confidence. Line runs.

O pulls the cord (UNSAFE) A/C = 正常 CLEAR

黄 呼び出し

HOLD

Andon cord. Glare, far-side, UNCLEAR. A human looks.

O pulls the cord (UNSAFE) A/C = 正常 CLEAR

赤 停止

AUTO_ALERT

Near-miss or blocked path. Do not auto-clear.

O pulls the cord (UNSAFE) A/C = 正常 CLEAR

Not a translation sticker — the mapping is the product

jidoka 自働化 · poka-yoke ポカヨケ · mieruka 見える化 · gemba 現場

現場 **gemba**

The Pack C aisle clip

sdg_warehouse_cam-2 / warehouse3

安灯 **andon**

Three lamps over that clip

Line = worst open ticket. Station = this clip.

自働化 **jidoka**

Automation with a human touch

AUTO_* only when the caption is confident.

ポカヨケ **poka-yoke**

Fool-proof the red line

gate_ok on HOLD is 400. 赤 never auto-greens.

見える化 **mieruka**

Make the risk visible

/api/andon, sticky lamps, shift report.

重大不良

False CLEAR

A red lamp does not become green without a person.

The ingest prompt decides what is searchable

≤800 characters. Labeled prose. Cosmos strips JSON. Same fields are the official payoff query.

PERSON**VEHICLE****MOTION****DISTANCE****PATH_CLEAR****NEAR_MISS****HAZARD****UNCLEAR****CONFIDENCE**

EXAMPLE · forklift-near-person

PERSON: YES. VEHICLE: forklift. MOTION: MOVING. DISTANCE: CLOSE. PATH_CLEAR: NO. NEAR_MISS: YES. HAZARD: forklift-near-person. UNCLEAR: NONE. CONFIDENCE: HIGH.

Gate: AUTO_ALERT / 赤 停止. PATH_CLEAR YES + NEAR_MISS YES is inconsistent — never AUTO_CLEAR.

Implicit identity. No PPE billboard.

Cannot undercut NEAR_MISS

Cursor

Skills + this gate
numpy logistic, ConfigMap $\lesssim$ 1 MiB

Never: Canary ASR · [docker](#) · GPU host 166.19.38.112 · [/api/v1/reports](#) · [YouTube](#)

赤灯は人なしで緑にしない

False CLEAR is illegal. YOLO never sole-sources AUTO_CLEAR.

Never AUTO_CLEAR

- PATH_CLEAR YES + NEAR_MISS YES
- Named hazard (forklift-near-person, pallet)
- CONFIDENCE LOW or UNCLEAR nonempty
- view_blocked / occlusion (hand only, not person)
- YOLO person+vehicle without HIGH PATH_CLEAR
- W&B prior cannot pull NEAR_MISS under 0.8

Poka-yoke

- POST gate_ok=true on HOLD → 400
- AUTO_ALERT → CLEAR needs confirm_escape
- Override reason cannot be agree / empty
- O / U pulls the andon cord (UNSAFE)
- A / C = 正常 CLEAR
- Empty queue → line lamp 緑 正常

Caption → parse → prior → gate → human → retrain

FEATURE_VERSION 3. w0[1]=1 on prior_logit. numpy only. Sibling imports for ConfigMap.

Files: andon.py · gate.py · inspection.py · kits.py · learn.py · main.py /api/andon · static/index.html

Line lamp = worst open review ticket (red beats yellow). Station lamp = the clip on screen.

Live /clip streams VSS. Mock paints andon-tinted aisle footage (緑 empty · 黄 hold · 赤 near-miss).

Retrain logs andon_line to W&B when keyed. Coverage should rise. Unclear distance stays 黄.

Line 停止, station 呼び出し — the clip is the aisle

Worst open ticket is red. This unit is a yellow call. That split is the board.
